		<p>Chapter note: Any goods of this chapter that are the product of a chemical reaction must be considered to be originating goods if the chemical reaction occurred in a party. The “chemical reaction” rule may be applied to any goods classified in this chapter if the product fails to satisfy the regional value content and change in tariff classification criteria provided for in the product specific rule.</p> <p>Note: For the purposes of this chapter a “chemical reaction” is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of the molecule. The following are not considered to be chemical reactions for the purposes of determining whether products are originating goods:</p> <ul style="list-style-type: none"> (a) dissolving in water or other solvents; (b) the elimination of solvents including solvent water; or (c) the addition or elimination of water of crystallization.

Chapter 29		Organic chemicals	
		Chapter note: Any goods of this chapter that are the product of a chemical reaction must be considered to be originating goods if the chemical reaction occurred in a party. The “chemical reaction” rule may be applied to any goods classified in this chapter if the product fails to satisfy the regional value content and change in tariff classification criteria provided for in the product specific rule. Note: For the purposes of this chapter a “chemical reaction” is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of the molecule. The following are not considered to be chemical reactions for	

		the purposes of determining whether products are originating goods: (a) dissolving in water or other solvents; (b) the elimination of solvents including solvent water; or (c) the addition or elimination of water of crystallization.

The “chemical reaction” rule may be applied to any goods classified in this chapter if the product fails to satisfy the regional value content and change in tariff classification criteria provided for in the product specific rule. Note: For the purposes of this chapter a “chemical reaction” is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of the molecule. The following are not considered to be chemical reactions for the purposes of determining whether products are originating goods:</p> <ul style="list-style-type: none"> (a) dissolving in water or other solvents; (b) the elimination of solvents including solvent water; or (c) the addition or elimination of water of crystallization.
